

TURBO CATALYTIC DEWATERING BOX

Looking for an efficient and cost-effective solution to streamline your dewatering processes and improve workflow?

Consider the Spectrum Water Technology Turbo Catalytic Dewatering Box.

Our **Turbo Catalytic Dewatering Box** is designed specifically with FCC catalyst removal processes in mind. No need for extensive crews and vacuum trucks – with an innovative, modified floor design that can withstand substantial weight and enhance filter removal during disposal, you can rest assured that your dewatering operations will run smoothly and efficiently every time.

We are confident in our equipment's capabilities because our dewatering boxes are built to last. With durable internals that are designed for even the most challenging environments and an increased surface area, you'll be able to achieve the most efficient dewatering possible and produce drier dewatered cake that's easier to handle and dispose of.

Whether you're looking to optimize your dewatering processes, reduce waste and disposal costs, or simply improve overall efficiency, the Spectrum Water Technology Turbo Catalytic Dewatering Box is the ultimate solution.

Contact us today to learn more about how our dewatering box can transform your operations and boost your refinery's productivity.
